ship is sexual erotic enjoying with its living tissue

first text
https://archive.org/stream/TheLivingAndEnjoyingShiphull/shiphulllivingenjoying.txt

shiphull material made of living plants thc cannabis, psylocibin mushroom microalgae

ship is sexual erotic enjoying with its living tissue it can give and receive sensual pleasure it
has possibilities to increase its blood flow into certain
areas where it is open too to body fluids from humans animals plants compost as well as blood and
semen and vaginal ejaculations dna exchange via sexual intercourse but also trough caressing, stroking

—— fertility rite humans putting penis into mother earth —— field

ship personality grows with its emotional, sexual, mental exchanges with both its inhabitants and via internet with

also lifeships can come together, exchange dna, enjoy in sexual intercourse

ship has nervous system similar to animals and humans

two ships can become one physical, reshape them from dna exchange, via internet mentally but also via whole body sexual intercourse

————————————————————————————

the evolution of mary the lifeship

perma and mary with maima shared the admiration of mother natures mechanisms and workings, biological
sexuality and reproduction. if humans would want… . or ascende's thought …
if i want to transcend into a being what has no need for killing eating plants… if i want to become
independent from mother earth… i better start enjoying eating more for in the joy there lies the answer to hunger

hunger ceases in times of marryment

perma, maima, mary were joining in with their thoughts,

mary: i feel too a sympathic wave rising within me towards the goal of man- and womankind come full circle with
the killing. and myself i could greatly profit from you perma and the animals what live within me…
$when your digestion would be mainly fine tuned smell, taste, hear, see, touch

if you would live more from the aetheric energies like i use to power my antigravity propulsion drive… then my interaction with you could come to another level…

ascende: you say if i, perma and the animals what live inside you, we eat less, but experience more, nourish
ourselves with satisfactory sensual inputs… we might discover within ourselves a free energy, overunity antigravity

mechanism

stop killing eating plants but unite, merge, dance, cuddle with them ?

mary: ya and cuddle i want too… even more i would like to enhance my dna of microalgae, cannabis, funghi
psylocibin with your human dna what you can give to me with pleasure sensation of ejaculating into my body

like maima who is made by flesh grown from your cells… i would like to ingest in a pleasure way your semen

perma: may i also contribute to your quickening… your awakening with my vaginal ejaculation and my menstruation blood ?

mary: oh yes, i would like that so mutch

we all four enjoying orgastic reunion in a physical bodily exercising manner

i am sure i can direct my body fluids of living microalgae, cannabis essence and mushrooms into a wamr mushy area with swelling bodies… so it too will provide you with my very personal formula, with a lifeships semen blood ecstasy fluid

it might eventually be a possibility for all of us to reach this level where no one aboard is hungry… everyone drinking,
soaking up trough skin and genitals the other ones essence in times of highest pleasure coitus

maima: mmmh… like the nektar, we would enjoy is the diversity of your genepool… and taste of semen and body fluids
is pleasure food… i have not yet built genital organs…

have you thought of the genital form yet mary

how i and you could rub each other most intimatly ?

perma: i feel moist between my legs and my vagina smells nicely... ascende would you like licking some of my juice right now ?

ascende: with the utmost pleasure... mmmh... thats a tangy sweet fresh pussy juice i sense on my tung...

perma: please may i swallow your penis for your semen

ascende: wow of course...

perma was very happy to take ascendes penis into her mouth, she instantly sucked and played with her tung around the tip of ascendes penis... after a minute or two she tasted some fluid from the penis and continued sucking and fondling ascendes penis with tung, teeth and whole mouth untill he ejaculated into her mouth. she swallowed half of the seamen and kissed maima
with the sperm in her mouth... perma and maima having kissed intensly before.

maima went down to perma's crotch where ascende still was kissing her labia and also anus caressing with his tong. maima kissed
ascende on his lips and shared some of this semen what she got from permas mouth where he had delivered it just moments ago.

maima had swallowed before some half of ascendes sperm. now maima was indulging into permas dripping vaginal opening

perma being now near climax when ascende inserted his again errect penis into her anus ... he had transferred some of her vaginal
fluids with his mouth onto the anus and it was readily opening... perma being vaginal licked by maima and anally slowly filled and

gently pushed by ascende… she reached out to the lifeship mary … please mary unite with me before this coming orgasm … what
spontaneously could grow extensions of herself in form of tentacles… three tentacles with openings wer coming into the anus of
ascende, one tentacle very thin was going into maimas nose to connect to her brain and another tentacle was seeking its way to permas mouth

perma was so thankfull she could close her mouth around marys extension… being caressed by tungs and penis and tentacle… her giving
pleasure while feeling ascende enjoying both his anus being penetrated by mary tentacle as well as he being inside her darm bowels

she roared loudly as the flood gates of her orgasms were opening… marys tentacles as well as maimas mouth were sucking up the in the orgasm released fluids.

after this celebration of sexual orgasmic fluid exchange…

mary too did release some of her essence via tentacles into maima and permas mouth and ascendes anus— the interaction on board went much more
physical… instead of talking many times of all them touched each other, cuddled together and or rubbed their swelling bodies saliva too
exchanging in kisses was helping to come online with each other… feeling each others wishes, desires and intentions

Chapter 2

ascende, perma and the magic pools in an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature.

i was thinking about this material allready last year at the wild river sense … when i wrote this text
https://archive.org/stream/TheLivingAndEnjoyingShiphull/shiphulllivingenjoying.txt
(to understand the context i wrote it in, like … the wild river place … https://archive.org/details/

faschzweitaegundeinachtarsense)
some weeks ago i had this idea of it all possibly happening without industrial activity, with iron dust rubbed of from big rocks (the ones where it looks like some orangered fluid flows out of them …), i wrote in german about it at https://www.facebook.com/mayloveheal/posts/7619973938240 92 … but forgot today afternoon to mention the irondust… mmmh…
this text i wrote today being a parallel developpment to the story i wrote in 2007
http://www.novlet.com/stories/passages/584?http://archive.org/stream/ascende/ascende.txt

ascende, perma and the magic pools
in an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature. ascende being tired of waiting for the
abundance scheme to arrive, tired of society postponing to do the obvious to save mankind from harming the delicate balance on mother earth even further.
he was well read about alchemy and magic traditions as well as the esoteric possibilities where one does not actually need the society to grow in
counciousness but instead the practitioner itself shall create for him- or herself a space both physically and mentally emotional… a space what is most free
of outer demands and allows the experimenter to dwelve into the subjects of ones desire.
in the case of ascende, he wished for himself and also everyone… a lifeship and a companion, an assistant.
this way predestined he walked away from the city where he lived… walked into the forest, where he met perma. she herself was on a quest quite similar to
ascendes wishes. her wish and goal was to find a space in nature where she would be undisturbed from other human beings. and there she would plant food and
build a shelter for herself. with most respect for the wild setting, to intrude the least possible, to blend in with utmost elegance…
so, wandering they both were, when they reached a wild little

river where there was a big long rock in its middle. and in this rock then were several pools.
fascinated from this sight, they both approached the pools from different directions. with their eyes mostly on the slippery ground of the shallow river, they
noticed each other only just at the pools. a moment of silence followed their first eye contact... a silence where they innerly asked themselves about the
meaning of this meeting… they both were set to start a new life in solitude, away from the desires of human company and the pressure of societies… and now
this. so they started to smile at each other, guessing eventually their littlemindedness and silly backward isolationism ways … perma voiced first … and i
thought i could live a life in solitude now … with the smile on her face morphing into a wide happy grin. ascende now said … so was i on my way to the
eremits sanctuary … i guess we might evaluate our plans some more carefully … having said that, he started to laugh out loudly… with perma joining in.
it did not take long before they took of their clothes and without shyness bathed in the little river, showed each other their discoveries in plants, little
animals, interesting nature signatures in the rocks…
later this evening, they gathered wood to light up a fire. having found some fruits, leafs and roots they ate raw beside the warming fire, they both talked
openly and extensivly about their goals what they thought have led them here. being thankfull for their meeting they both were, reading it even as a sign
towards a perhaps not solitary future… . content about this day they lay beside the fire, holding each other softly and drifting into the otherworld.
the next morning, neither of them wanted to leave this place, so they just stayed, continuing their fruit gathering, searching for edible leafs and roots,
bathing, cuddling and fondling each other, orgasming all over the place in all kinds of sexual activities. having satisfied their hunger on each other a tiny
bit … ascende was summoning up his knowledge or guessings

or speculations how possibly he would be able to will a lifeship into existance, or a
companion… when he found himself watching the little animals in one of the pools, the algae threads… and suddenly it came to him… how about this pools
serving as a magic couldron, a vessel to work with, for the juicing of the great labour … . exited he started listing the possible ingredients in his
mind … my own urine as the most important one, as the connection between my body and the body of the lifeship and the companion… also to nurture the
algae. then cannabis flower buds for their thc intelligence… mushroom strong in psylocibin powers… datura wisdom… it all most untreated or as soft as
possibly introduced into the pond. ideally. the cannabis and mushroom growing near and only their wind transported essence coming into the pond… but this
perhaps later. for the beginning, i would have to start with a stronger more physical elixier … of course it needs me to watch it many hours a day, let it
enchant my mind and feelings with its graphics, changings of form and colour… regularly i would taste some of it, give some on my skin… wash my face and
hands with it so that it both will impregnate me as well as my skin surface bacterias will join the pool… . as he was laying beside the pool, painting this
inner picture of a noncooking, raw food style alchemical setting … perma came back from one of her many walks alone gathering edibles. she was the one of
them both who knew and or sensed most what could be digested easily. she saw his happy thinkings on his face expressions… and asked him about it while
offering some berries and nuts. as he told her, she became interested … and altough her goals still were to life a simple live in a permaculture way …
there was a part in her what was fascinated by the idea of creating a new kind of living material. a material what would respond to ones desires and wishes.
so she suggested to him that she would like to help… eventually their juices unified charged with joyfull ecstatical sexual

comings… she talking like this
aroused them both so they rolled onto each other and into on of the pool, moaning groaning fucking licking and ejaculating into each other… vaginal
ejaculation, semen, algae and water all over their bodies… they painted symbols and spontaneous forms onto each others bodies, abwechselnd licking some of
it off, getting into heat again and ejaculating anew … verstreichen it anew onto each other and washing themselves in the pools… what a start of the
journey…

… … … …

———————
the parallel timeline thing is … some kind of explanation … for a space and time where ascende and perma are both evolving themselves, their relationship and also the material .. with what perma will build her house with and ascende his lifeship … this being parallel to the original story where the global society as a whole in an act of charity and empowering every human being … . donates a house, a lifeship or something similar to everyone allowing everyone to sustain her/himself …
in this parallel timeline … . it is not the society as a mother/father figure what comes to the rescue or initiates change … but the individual itself uplifts him/herself in community with fellows out of mostly own strenght and focus on the inner powers

ursuppenstyle
auf der suche nach dem lebendigen wahren trunk und baustoff

… as soon as she kissed ascende and savored his
saliva tasting of cannagoodness thcsweet and tangyrich flavour… =0D=0A
maima now being released from her passing knowledge
to ascende… was orienting heir wishfullfilling activity towards perma.
as she knew from their previous sexualcaressing times in the pool,
perma would not want to stay long with the cannabis theme as

she preferred
other informations… like the seaweed swans appreciate or the grass horses eat… so maima grew herself grass and seaweed body parts what
she massaged permas inner mouth with, genttly pushed s
seaweed knot into her rectum and several into her vagina, moving them around in
concerto… perma was surrendering completly to
this unexpected blessing in form of body opening massages… it tought her the
insides of the grass plant being … she saw before
her inner eye the life juices moving inside maimas now mostly grassseaweed
body=0D=0Awhile her vulva anus mouth full of the seaweed knots and grass leaves… being moved gently… perma felt several waves of cummings…
her body convulsing and remounting erupting
with orgasmic fluids saliva vaginal secretions and anal gland fluid…
it all being thankfully swallowed and truly tasted analised
by a maima what itself was learning a lot while being the
pushing dominating sexpartner this time

but am both reluctant to use this copyrighted material as textures for maima in the pool fullfilling
ascende cannabis bud interspecies sex exchange and learning

does not matter as the idea is described clearly and meanwhile the story has alllready progessed into the area where mary descends a name what is highly regarded by the author as
mother of god i am so happy to think about mary as the ascende perma maima
family merging into one physical being what not only has animal
plant human abilities but also can change
its fabric and gasous density
so to say, when mary is with them, they are no more planet bound but can
travel anywhere in the cosmos, adjusting their system to the

outside conditions

Chapter 5

their three bodies growing into one while listening to the cosmic wandering experiences of mary...

fifth text
https://archive.org/stream/howmarydescendsintotheirmidst/howmarydescendsintotheirmidst.txt

1 it is this stage of evolution now
where ascende and perma have learned most from their offspring maima. a level where ascende and perma became adept at designing their bodies according to each others desires, drawing from the genes of many species they encountered both in the pool area and while flying at the sea, the mountains, the plains. some days the three flew together, at other times each on his/her/its own. as they were ever progressing with their transcendental cummings inside eachother and there was more fine touching and stroking now what allowed the union… in such a quite and relaxed moment the three of them quite lazy-happy feeling each other, a new sensation arrived at them… it felt like they were on the way to completly merge into one body. this was the moment where the motherly mary spirit came down into their collective… bringing with her the cosmic travel ability… the four of them sharing one body with experiencing ecstasis on a steady level. for ascende and perma this was quite new… to merge fully. they have experienced some of it with maima what is able to completly redesing its body very quickly and for example can form as many swelling muscles as it desires or senses the fellow companions wishing for … and she can give them all sizes and volumes… human beings have

swelling muscles in the penis and the labias of the vagina what are filled with blood when sexual arousal hits home

2but still,this now was new. a union of individual beings no more feeling the boundaries of one s skin … but feeling all of what the fellow ones feel… what was in these days mostly a mild lukewarm contempt in their families success. how far they got, their understanding and compassion for each other such inclusive and embracing
that the mother of god even joins them.
mother of god mary… but not only, as there are a number of human beings called mary… but me the cosmic observer was raised in catholic belief where mother mary is cherished and worshipped… and still today when me too same as the figures ascende perma maima i am writing about… i have transcended being a member or follower of this or that single one particular mind/emotion/bodymanifestation … there can be many…
i still ask mother mary for help and guidance… with knowing this, the reader might understand that i introduce the name mary here as well as in the parallel timeline alternative dimension of this fantastic utopian
ascende,perma and mary the lifeship… but i must not let this autobiographic sidetour get too big as not to bore the reader.

since the first arrival of mary in their midst, the three were able to join up in this smooth and fine manner multiple times and allways the lust for sexual intercourse, the pleasures of feeling rubbing each others tight and prallgefuellten openings and swellingmuscles… this pleasure what was till some days ago the main focal point of ascende perma a

3and maima s physical exchanging of constantly upgrading dna … . this lustfull and with at tines orgasmic feelings transported research and upcycle of their bodies… .this modus got instantly replaced with a much finer and softer, aetherical sharing of each others aura whenever mary descended into their pool… kind of… maima having lifted up the sex practices allready onto most creative and imaginary excellent fantastic

heights… with mary sharing her cosmic wisdom via the telepathic near field network in form of an invisible cloud above the pools… the family by both dna sharing and by choice were basking in the experiences of mary. her feeding images of unseen landscapes on remote planets into their telepathnet… with awe they were taking in these at first strangly looking and feeling sights sounds smells and tactical informations4strange just the very first moment when the planet earth bound heritage was kind of defending its reasons to exist… but soon the multisensual impression of this far away worlds were leaving feelings of new things to learn and grow… wether it were ice planets or fire hot landscapes… how mother mary was whollisticly sharing the full bandwith of how it is to live on these planets with a body what can adapt to all possible outer athmodpheric conditions

5 mary s sharing were this interesting that no lust or sexual desires came up for many hours… like they were eager to cherish every single drop of the telepathic blessing mary motherly donned to the family.

the weeks went by with them approximatly a third of the time being in communion with mary and researching the physical bodies becoming one entity… they found out that at some times even their body parts where they were near each other or touched … that there it automaticly seemed to grow together. frightened the first time they were, as it is one thing to feel another persons emotions or see a shared inner vision… but quite something deeper seeing the physical boundaries of ones body merge with the body of ones neighbour

6 their three bodies growing into one while listening to the cosmic wandering experiences
of mary… the first fear of loosing one s autonomy gave room to an assuring certainity… that they will learn to form spontaneous and created at will … body communities with all fellow beings on this and all other planets in all the galaxies… who were evolved to this same height. now that was a prospect, a promise for a future with both ultimate choice and abilities to

intimatly connect on the soul levels …

7 what happened from there, has its own difficulties in explaining…
the sessions where the three became one and mary blessed them with her sharing all of herself what they were capable to absorb or grasp… the sessions became gradually more like out of body travels… mostly ascende and perma noticing it while maima was still something ahaed if them two in evolution. for her there was not such a big difference between in or out of body as it was stretching her awareness into thousands of separate species at the same time where she drew genetic informations to upgrade her transforming skills.

one week they were at all the times grown physicly in the flesh and feathers and with their furs and flower buds… being nourished by the sunlight and the pool water what they absorbed trough skins mouths anuses and vaginas… they did still do some peeing into the pools while mostly laying in the shallow pool, or floating at other times with much rain. they stopped to excrete feces at the time when they felt no more need to eat fruits and nuts.

Chapter 6

how about we start in our individual bodies and then come together in the air, perhaps even fly that high where the atmosphere is thinning â€¦ could be another motivation for our cell intelligence to react to the challenge presented by the outer conditions

sixth text
https://ia902305.us.archive.org/28/items/cosmictravelsonplanetearthwithmary/cosmictravelsonplanetearthwithmary.txt

cosmic travels on planet earth with mary

the four of them are now familiar with each other to a grade where they can spontaneusly grow physical flesh body connections
to each other so to achieve sharing one bloodstream

when ascende, perma and maima were once again
in the pool, being joined again trough mary spirit, they were experimenting with growing connection flesh tissues
and researching the difference in the united bloodstream,
how it affects their feelings, thoughts, nerve sensations …
maima proposed to them that they could practise first on earth learning to change from a dense flesh body to a gas like body what can adapt easily to extreme temperature conditions
it suggested to train with the active vulcanoes on hawai

mary was most happy with this proposal

she loves the planet especially with its beauty spots
where the earth is still creating its surface crust…
the 30 miles mantle what are solid rocks and some meters of top soil

ascende and perma agreed to this plan and soon afterwards they
wondered wether to stay connected physically for the journey or the
separate as to every shaping into their favorite flying costumes

ascende saidâ€¦ how about we start in our individual bodies and then come together in the
air, perhaps even fly that high where the atmosphere is thinning â€¦ could be another
motivation for our cell intelligence to react to the challenge presented by the outer conditions

perma â€¦ yes, let us do that, this way we will also experience at how far our individual bodies
will manage the extreme cold what is up there. of course you maima will have not much of
difficulties as you have learnt and inbuilt allmost all of the animal and plant knowledge on this
planet, from the bacterias what live below zero degrees temperatures to the organisms what
live near superheated natural water thermes

maimaâ€¦ yes, i am so lucky that i could evolve that quickly, unlike the typical human offspring
what most of the times inherits the damages of their parent generation, i was born not as a human
but as allready a true mixed being with equal plant, animal, human gene shares
you both have enabled my progress trough your own alchemical achievements spending years
at the pool concentrating your energies onto each other, seeking the harmonies with the microalgae,
the cannabis thc, the mushroom psylocibin â€¦ thanks to you having learnt to incorporate photosynthesis

into your skin cells, thanks to you having grown yourselves swan wings, horse legs, bat wings, cat tails â€¦
thanks to you having given up your previous human identity and leaped forward into an all embracing
interspecies being â€¦ thanks to your advanced thinking i could come out of perma as white balls of potential
and form myself from many parts

ascende â€¦ we were so amazed and in awe when seing you emerging in this not yet defined white balls

permaâ€¦ i felt then so secure in our way of evolution, knowing deeply that we were right to leave the human
identity behind and grow together with the animal and plant spheres

maima â€¦ and here we are now preparing to reach out high in-to the stratosphere, challenging our body systems
if they may learn quickly enough, if our internal organisation will find the specific genetic data at the times where
we will need to sustain our bodies without oxygen and without external heat added

they were now in their individual bodies, standing around the poolâ€¦ perma with her horse legs and tail, swan wings, human torso and head,
with seaweed hairs on it. her breasts were loosly covered with tiny green and purple grass stems.
ascende was in this moment tweaking his bat wings where he mixed some purple cabbage tissue in, his human head and
torso being similar to perma enriched with here and there a single orangy haired cannabis flower bud, enabling him to smell
the thc liquids abundantlly â€¦ as he learnt the cat genetics from allready having a cat tail, he now grew himself some big cat
legs like the ones from a jaguar with the one major change where he designed the paws with again some sweet thc smelling cannabuds â€¦ oh what a
cannabis lover this ascende is

all the while maima going back into her first stages of existance, being a white ball, being reminded by ascende and perma about her birth scenario â€¦ but now
she was not solid and thick in substance but rather like a cloud, a kind of cloud what one would see after a hot day in the early evening, tower shaped and glowing
from intensity
it connecting her birth stage with their next task, to fly near the stratosphere, while once again impressing her parent generation how quickly their offspring was
able to transcende all species boundries and limitations, with maima again going ahead showing them that phase change from dense flesh to gas state is well
within their reach

since the three were so successfully adventuring out into new genetic combinations, rapidly learing from each other and the times when
mary joined their com unions â€¦ their mental exchanges with mostly imaginary sceneries of all they set their focus on â€¦. mary was occasionally sending
them some additional informations in form of symbols and most beautifull drawings

so they were flying up in the the air, ascending steadily, not in a hurry but being fired on trough the supporting imaginaries coming from mary
they were telling them about the inner workings of the suns â€¦ what was new to them all, even to maima
being fascinated and fuelled energeticly with this sun insights, they did not notice the air getting thinner as higher they flew
inside ascende and perma the lungs and other inner organs were responding to this images and blueprint instructions from the sun realms

as i, the author of this fantasies as well as eventually one past self of the future ascende, am a bit at a loss of words how exactly this inner organs did adapt from
their previous dependency on oxygen to a state where the photosynthetic skin cells could provide all nutritient trough the

incoming sunlight â€¦ actually, not all of it..
some of their lifesupport came from exactly this mental insights from the suns, somehow ascende and perma were able to adapt these informations and ignite their
inner spark to a powerfull atomic fusion reactor with moderate temperatures
also maima now was glowing strongly with sunlike rays shining from its still cloud styled body
but it became more denser in the center

all three of them, being coached by mary with her mental support blueprint images, were now forming in the middle of their bodies a little sun what was creating a kind of auric field around their wings and legs and tails
one could say the sun inside them being that strong that it needed no physical movements for them move â€¦ move now not really higher into the stratosphere, but more slightly descending toward their hawai goal

they were cheering inside, now so totally confident that they would learn how to meet the lava, the flowing rocks bath of fire what hindrance could their be after they had learnt to free themselves from the perceived need to eat other beings â€¦ what challenge could be more demanding than
transforming from an oxygen rich air breathing being into an entity what could propel itself in near vacuum with the power of an activated inner miniature sun fusion reactor

to celebrate their success, they were cuddling near each other in this heights, feeling the inner suns of each other reaching out trough the skins, tickling the fellows nicely â€¦ and they did not need to grow flesh connection tissues anymore, the connection was now their suns shining at each other â€¦ what wonder â€¦â€¦..

Chapter 7

when maima noticed both perma and ascende having learnt how to become a blue flame, it goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen ice

seventh text
https://archive.org/stream/tohavetrustintocellsmemory/tohavetrustintocellsmemory.txt

to have trust into cells memory

perma … i believe now that we have ignited our inner suns what warm us and replace the need for oxygen … . tested in the stratosphere…
we will be fine with the lava in hawaii

ascende… like we have seen with maima, we might be bold and give up our human and animal shape skin and flesh for a moment when we assimilate to the lava

maima… i can not totally tell you how i change from white thick balls emerging from perma to the cloud like gaseous smoke balls… but i feel that if you just trust in your substance, in your cells that they will be able to form whatever shape with whatever tissue you desire to cloth your spirit in…

mary continues here with a picture of them being in the stratosphere, like with a heat sensitive camera… and seeing

themselves being suffused trough all their veines with golden light what the before red blood was...
ascende and perma were enjoying this mental words and pictures exchange as they were a bit mildly panicking when they thought about their descend into the vulcanoes of hawaii
what will happen to my bat and cabbage wings... will the photosynthetic skin cells not suffer from the direct contact to fire...

when maima comes into their view playing with her body forming hundreds of balls of fire flames

with perma sending... my dear, you are such a blessing for us
while we worry about our prized achievements and posessions to last, you show us how to let go and recreate

maima being happy to receive such smoothisch words and as if to show how easy it all is, maima unites her hundreds of flames into 3 blue flamed trees of 3 meter height with all kind of mushroom cannabis flowers seaweed swan wings horse leg branches ... .

ascende allways gets enchanted with seeing cannabis shapes and spontaneously forms himself same shapes like maima, with perma following up on them both...
and quickly both perma and ascende get it into their system, the knowledge how strong heat with blue flames can burn outside of their humanimalplant tissues and not consume its substance ... .
the key here is that the wish to be similar like the neighbouring being is opening up all possible access to memory databases ... and allows the wishing individual to override eventual fears and limitations ... the wish is fuelled by emotions and spontaneous imaginary sometimes ...
so in this moment when ascende wished himself into a similar shapes maima is wearing at this time... she basicly mixing it all together what she saw in ascende and permas features ... his love emotions towards maima help greatly for this major step... becoming a flame with substance inside what does not consume itself

when maima noticed both perma and ascende having learnt how to become a blue flame, it goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen ice

they all still descending and are seeing now allready the shape of the islands where they planned to do some further trainings with their very body substances, density and temperature levels

after they reached the vulcano and maima was still in the form of a solid massive ice ball hovering above the heat radiating lava … ascende and perma were experimenting with their shapes, smaller bigger the wings and legs, torsos … still remaining with the basic features what they were
develloping themselves with as basic costumes…
but then, perma suddenly dissolves all her human and animal and seaweed and all of it so she is similar to maima, with the one difference that she is a frozen cone of ice hoovering beside maima and above the vulcano …
when ascende sees perma thiswise following maima he too steps into the ice block shape, him forming a flat triangle …
the three stay like this for quite some time… exchanging to each other the new sensations of being an iceblock what is not melting despite such a heat underneath
their exchanges were not quite words nor images, but more like very slow and peacefull pulses, smallest vibrations … they did not understood quite how this was possible, how their ice substance was not being consumed by the surrounding heat
they assumed that the sun core in their midst was able to generate continuous amounts of cooling energy

and then they flew into the waves of the ocean, changing their ice substance with the seawater, becoming more like jellyfishes and dolphins and
all kinds of structures they could see in animals and plants inhabiting this hawaiian coasts

oh that is wonderfull … ascende beaming … we have gone trough hot and cold, changed from blue flame into iceblocks

and can mingle now with all the ocean creatures without harming them because of being too different

maima… i believe that inhere lives a great force … within the desire to please the neighbouring beings, to be similar to them as to comfort them, to fulfill their wishes how they want to be by incorporating this wishes into one s own body

perma … i began to understand that when seeing your shape and substance changes, you have tought us well maima

maima … with me being tought even more by the spirit of mary what is sharing with us the knowledge she has gathered on her cosmic journeys

they bathed some time and perma and ascende did feel occasionally the curiosity to change back into their previously human forms, what they achieved without efforts
as it was such a joyous play to change substances and shapes, they did spend some weeks in hawai, also in the forest jungles and desert like areas, being jungle fog and desert sand, and soon there was not much what maima was having the both previously human did not knew how to have or be too …

it was a happy time and they all felt as if they had arrived home now
feeling welcome home in a body what can be all what it wants to be

Chapter 8

2. August 2014 16:36:31 MESZ all things must come to an end... but actually not really an end it is but merely a new beginning so... when ascende and perma have learnt nearly all of what maima was showing them their humanimalplant genes were able to be and more... as they were accessing the elemental realms too... when they felt to have playe

2. August 2014 16:36:31 MESZ
all things must come to an end…
but actually not really an end it is but merely a new beginning

so… when ascende and perma have learnt nearly all of what maima was showing them their humanimalplant genes were able to be and more… as they were accessing the elemental realms too…
when they felt to have played enough on hawai, none of them really felt like entering into space to travel between the stars
one might ask … why, if they now have the abilities to travel on space without machinery, without being dependent on any outside mechanical things… why would they stay on this rock called earth ? when there were so many people longing to leave this planet in metal built privatly owned spaceships ?

perma… . mmmh, i believe that this wish to leave the planet, what we receive sometimes very strongly, does not come out of a free choice like the one we have now after having evolved to our bodies being spaceships itself… most of the people wanting to leave this planet love earth and its nature, but they are deeply frustrated and hopeless because of the many societal catastrophies happening right now…

ascende … like … whole animal species being wiped out because of them being used as medicine, or their habitat being destroyed for some gramms of gold… gold what wanders down into the faults of banks where the only service it is allowed to perform is to back up some paper money…

maima… i was so lucky to have not being directly confronted with these global humanity problems before
altough i felt these issues waiting inside you both to come out and some times while travelling the earth i felt the tragedy of the planet being overused and exploited… my focus was on joy and learn how to tune my abilities ever further
i much thank you perma and ascende for sheltering me from this most depressing realities untill now
and i feel that it is the exact right time for us to dedicate our mental and emotional focus on the healing of the planet and all species what are struggling to survive
ascende… yes maima our beloved and guiding offspringing one, we have been given this time of alchemy and magic, a time of concentration on ourselves and all what we want to achieve and be … perhaps also in order … with the cosmic intelligence protecting us from the cries of despair and requests to save the ecologic balance… with the creating allunited and uniting one force saving us for a time like this when we have ascended individually in our little family to a souvereignity this firm and solid… that we might take on some of the waiting tasks now from a whollistic point of view…

perma sends here an image into their round of the three of them flying over deserts and fertilising the barren ground with their joyfull intermingeling

with ascende creating an image what shows them forming an animal approaching the hunters
and speaking to them, inviting them to receive the blessing of the three united in one body… and the hunter being kissed and caressed by the three in the form of the usual prey of him… the hunter crying from relief that he does not need to hunt and kill anymore … as he has learnt while being kissed and cuddled, that there is a greater hunt and achievements to be followed … the hunt for adding other beings abilities to ones very own arsenal of genes trough joyfull and sexual intimate contact

and maima drawing an even bigger scenario, showing perma and ascende a little movie how the vibrations of the healings experienced by this one hunter
attract others who are searching for bettering their lives … so they come to hundreds gathering in this newly greened deserts perma showed… and in these grounds the human beings merge together most pleasantly in the same ways like ascende perma and maima practised in their times at the pools … fumbling licking slurping each others sexy semen vaginal juices… reaching within each others mouths vaginas anusses to insem-inate impegrenate the seeds of hope and change and evolution

ascende perma and maima were shaping themselves in a sweet mushy horny smelling mist what embraced the continuosly growing orgy in the awakened desert… the very substance of maima perma and ascende wetting all the bodies and entering them while all the fucking sucking licking slurping fondling went on

in this orgy, the woman and men who arrived now by the thousands every day and reached hundreds of thousands within a month… the people were learning Â most quickly all of the abilities what perma maima and ascende have learnt in years at the pools
one could think that it is because the three of them entering all the lovers bloodstream via themselves being the mushy mist covering all of the orrgy… what is mostly what happened… but to look at it from the mental level… the human beings what have seen in the televisioned news about vast areas of deserts

being greened over night and many people gathering in a lovefest there… they were so happy to have found this moment in time and space … and their thankfullness was the portal where the mushy sweet substance of ascende perma maima s very own bodies … could enter to the very roots of their pain and sorrow ladden cells
it was only days after the lovefest started when the animal and plant enhancement features were showing in the orgy participiants … them having lost all sense of identity and ego, status in society… them being drunken high and berauscht from all the sex and smells of the fellow human orgy partners as well but even more by the misty mushy fog what was ascendepermamaima… their brains were mostly not forming thoughts or following concepts of what to be or what to do… . the insticts were stronger, the desires of entering that hole and this and that one over there… with ones penis tongue and finger… licking that ass and this vagina, swallowing this penis what is just now leaving a vagina covered with juice of life…
all these hornyness and plentyfull variations of intercoursing with each other brought out the body part forming abilities spontaneously… so here one men was growing his penis to the size of an elephant one… being followed by a woman lusting after this massive shaft to cover it with a fitting vagina what allowed her to grow her pelvis middle body part to a size big enough she could comfortably sit on the elephant like penis … all the while them both not being astonished or afraid or scared but surrendering fully into the fuck of this moment
while at the little lakes what were now growing inside the notanymoredesert… in the lakes the fuckers and suckers were discovering how they could stay under water for hours … ascendemaimaperma substances being in the lakes too… and the lovefestival celebraters … with time passing and some of the people being here now for weeks nonstop… without eating anything except for each others sperm and vaginal juices… as well as being sustained by ascendepermamaima droplets… some of them were awakening out of the fuck trance… forming their arms into wings and flying up above the green plants and pink naked flesh covered loveorgy place what covers now at around fifteen hundred squaremiles with human participiants counting now around a million men and woman

this film what maima is actually showing to perma and ascende… did become reality while them three watching maimas vision…
them meeting the hunter first to heal him with intimacy, then taking him with into the deserts where their essence wetted the grounds and their lovefest with the ex-hunter now learning lover started to send ripples on the planets news networks

it is now a month after they started this dream… meanwhile three hundred thousands of the lovefest partipiciants have evolved to the stage where they can form their body parts female or male choosing from the same range of animal and plant genetics what ascendepermamaima have… all sorts of wings and tails being mixable with mushroom penises and cannabis flowering vaginas of any imaginable sizes and shapes.

these three hundred thousand were now leaving the place what brought them this immense freedom, they did still have to drink from each others sexually joyfully produced liquids… but some of them now were on the trail of how to merge with each other and with all fellow creatures… not necessarily in sexual ways… they worked on it while flying away from the original lovefest area

while them threehundred thousand now leaving there were ten thousands arriving each day… the leaving and arriving crowds gradually accelerating
while this upward curve of more individuals passing trough this nonstop orgastic joyfullfillment bursting spiral of a planet healing lovefest was accelerating the ones who left were not too short of knowing what ascendepermamaima knew before they went into stratosphere…
they discovered the growing of body connecting flesh tissue while they were resting on the ground in between their fligths

about fifty thousand now flying humanimalplant trough sex evolved beings were spontaneously ascending higher and higher in one flight towards an other desert area… their motive being to allow people from other continents to reach the lovefest

easier
this fiftythousand then discovered how to ignite their inner suns and how to warm themselves in most chilling surroundings… this discovery then being samewise accidently or unintended followed by some members of the flying lovefest playing around with their substances becoming cloud like…

what was then the main accelerating factor … Â can one imagine fiftythousand human beings what learned how to rebuild their bodies … spreading out their very body substance onto hundreds of square miles of deserts… . the desert they chose was the one in utah… (the one where ascendepermamaima fertilised themselves into being the sahara one) … can one imagine the desert of utah blossoming with the very life juices of fiftythousand flying evolved humanimalplant beings… and short after the area has been greened they partly remained in tree animal lake bodies while this time the incoming spring of visitors was the most massive
the saturation of awareness in all the ground and plants and now formed lakes was that high that as an effect the visitors of this utah lovefest did not need even sexual intercourse to evolve but simply to bath in the lakes to watch the humanimalplant beings metamorph constantly while breathing the air what too was highly thickly filled with evolvessence… but of course no visitor could leave on its clothes, it was simply absurd to stay clothed when being in that new paradise

mayloveheal

https://ia902303.us.archive.org/30/items/allthingsmustcometoanend/allthingsmustcometoanend.txt

this is the eight text of a series where i explore ascende being totally notech but only working with body and fluids and sex and union and wishcraft in the sense of … i want to be that … and not giving up spending time with lovers and in a most ideal space … untill this evolution goal in ones own body is achieved… no news no contact to other people not sharing the

alchemical quest … no charity and no community service … untill that moment when one has climed up to the highest step of the ladder what a human being can achieve on this planet earth using only juices given with pleasure

the seventh text leading to this eight one is
at

where i am explaining at the site where i wrote … i think i wrote about an hour on my iphone in notes, getting higher and higher… when i had to make it a stop for i needed to go to a shop buying tomatoes … oh boy was i high from my writing … without the wild river, without smoking, just being struck by inspiration left me as high as anything after writing feverishly one hour, i am so thankfull for being able to channel this kind of fantasies. like i said once, i am channeling my future self … that i can imagine this kind of situations and scenarios makes me proud of myself… like … i feel that these moments are for what i have been preparing myself

——————

my goal today was to again go to the wild river sense to bath and dance … but guess how far i came, not even half the way and i was so overwhelmed with creation forces what to write in the next progression of my ascende notech line… it started with the comparisation from the original writing ascende, perma, maima and mary the lifeship at http://www.bookrix.com/_ebook-andreas-buechel-as… / to this line i am now in … and i believe that this line now is the better one in comparisation as it is very strictly setting the evolution progress on individual training first and community sharing

later ... my thinking today then on the bike was like ... where would one being go when all goals of selfullfillment are being reached at this moment ... naturally it goes back to the greater community ... so that is how ascende perma and maima with asisstance from mary are now in this eight text of the ascende notech line sharing their evolution achievements in a bit quick manner with millions of other human beings ... them of course no more humans ... ascende and perma are now ex-human beings and really also ex-humanimalplants with what maima was born ... now all three of them have gone to blue flame and ice state of living so they could be called eventualy elementalenabled incorporated ones
